

HAND IN HAND

A FORUM FOR PATIENTS & CARERS

This forum is designed to help men and their partners / carers through the challenges they face post diagnosis and treatment of Prostate Cancer. Urinary incontinence and sexual dysfunction are two common side effects from Prostate Cancer treatment that can be especially burdensome for survivors and their loved ones.

Leading health professionals will provide important information about prostate cancer to give you a better understanding of the disease, treatments, and how to deal with some of the difficult treatment side effects.

Our purpose in hosting this Forum is to equip men and their partners and carers to live their lives to the full despite the challenges of dealing with prostate cancer.
