Petition title:	**Petition of Kristine Hayward: Implement a funded, risk-based, equitable prostate cancer testing regime in NZ**
We respectfully request:	That the House of Representatives urge the Government to implement a centrally funded and administered risk-adapted early prostate cancer detection strategy based on prostate-specific antigen (PSA) testing, risk calculators, and MRI imaging, and State-funded support for the psychological and physical effects.
Petition reason:	Prostate cancer is the most commonly diagnosed cancer in New Zealand men. Over 3,500 are diagnosed every year and 650 die. Currently, I believe testing is unfunded, disorganised, and inequitable. I believe inequities in testing allow too many men to die, with Māori and rural men disproportionately affected. I believe we need a structured, population-based testing approach for early detection of prostate cancer in men over 50 (40 with a family history), just as we have with breast cancer.
