

# National Conference 2023

New horizons in prostate cancer care

At a time when changes in our health system begin to take effect in earnest we invite you to join us at our annual conference in Auckland. Early diagnosis features again in our programme, particularly regarding the availability of world class diagnostic imaging and the practice of our primary healthcare providers, and our line up of expert speakers runs the full spectrum of important issues in the prostate cancer landscape.

## DISCUSSIONS AND INSIGHTS

- The latest position from the urological professional body on the role of the PSA blood test and how we should be looking to deploy it in the fight against prostate cancer.
- The latest science behind the role of diet and nutrition in slowing the progression of prostate cancer.
- New approaches to radiotherapy with the potential to fundamentally change the patient experience.
- The vital role of new information and data in improving outcomes for patients, and what it can tell us about how we are performing as a nation in serving men affected by a prostate cancer diagnosis.

## SPEAKERS

**Prof Richard Mithen | Professor of Nutrition, University of Auckland**  
[The role of diet in prostate cancer](#)
